DETAILED ACTION

Remark

This communication is responsive to the amendment and response dated June 20, 2007. Claims 1-6 are presented for examination. Claims 7-11 are canceled without disclaimer.

Allowable Subject Matter

1. Claims 1-6 are allowed over the prior art.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

None of the prior art made of record teaches or suggests a method for converting input image data specified with respect to a first white point of a display panel to a second white point with steps comprising:
solving for the weighting coefficients that relate a set of first white point coefficients to said second white point; computing a mapping of a first set of color values utilizing said first white point, a second set of color values; said first set of color values being derivable from said weighting coefficients; and converting said input image data into output image data using said mapping.

Childs et al. (GB 2,282,929) teaches a method for converting from a source color space to a target color space, wherein the source color space resulting from a

combination of N primary color points and said target color space resulting from combination of N+1 or more primary color points in said target color space (see fig. 4, and paragraph 3), by defining, for the target color space, a set of at least N+1 primaries in which color points will be rendered as a combination of said primaries (Fig. 5, pg. 17 last paragraph); defining a color point in the interior of said target color space (Fig. 5); calculating solution matrices for each region of the target color space (see pg. 9 last paragraph, pg. 10 3rd paragraph). However, Childs et al. fail to teach solving for the weighting coefficients that relate a set of first white point coefficients to said second white point; computing a mapping of a first set of color values utilizing said first white point, a second set of color values; said first set of color values being derivable from said weighting coefficients; and converting said input image data into output image data using said mapping.

Kasson (US 5450216) teaches computing the hue angle as the arctangent of the ratio of the two chrominance components (Fig. 5, col. 8 lines 58-68), and a gamut converter for optionally mapping the gamut of the source color space to a target color space using the calculated hue angles (see Fig. 5, and col. 8 lines 32-37 and lines 58-68, col. 9 lines 48-65). However, Kasson fails to teach the above underlined claimed features in the manner recited in the claims.

For the aforementioned reasons, the limitations of claims 1-6 of the instant application are allowed over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
